Amazon – Global E-Commerce Intelligence Suite – Financial & Profitability Analysis

Report prepared and analytics conducted by Soham S. Amburle | 02 March 2026

The Financial & Profitability Analysis Dashboard provides an executive-level financial performance view within a global e-commerce business model inspired by Amazon. Built using a synthetic dataset of 100,000 transaction-level records, this dashboard focuses on revenue growth, cost structure analysis, margin performance, discount impact assessment, and profitability segmentation.

Designed in Power BI using a structured star schema data model, the dashboard enables executive leadership, finance teams, and commercial stakeholders to monitor financial KPIs through dynamic filtering and structured visual storytelling.

Through KPI cards, trend analysis, profitability segmentation, performance gauges, and interactive slicers, the dashboard delivers a consolidated and actionable perspective on financial health and profitability drivers.

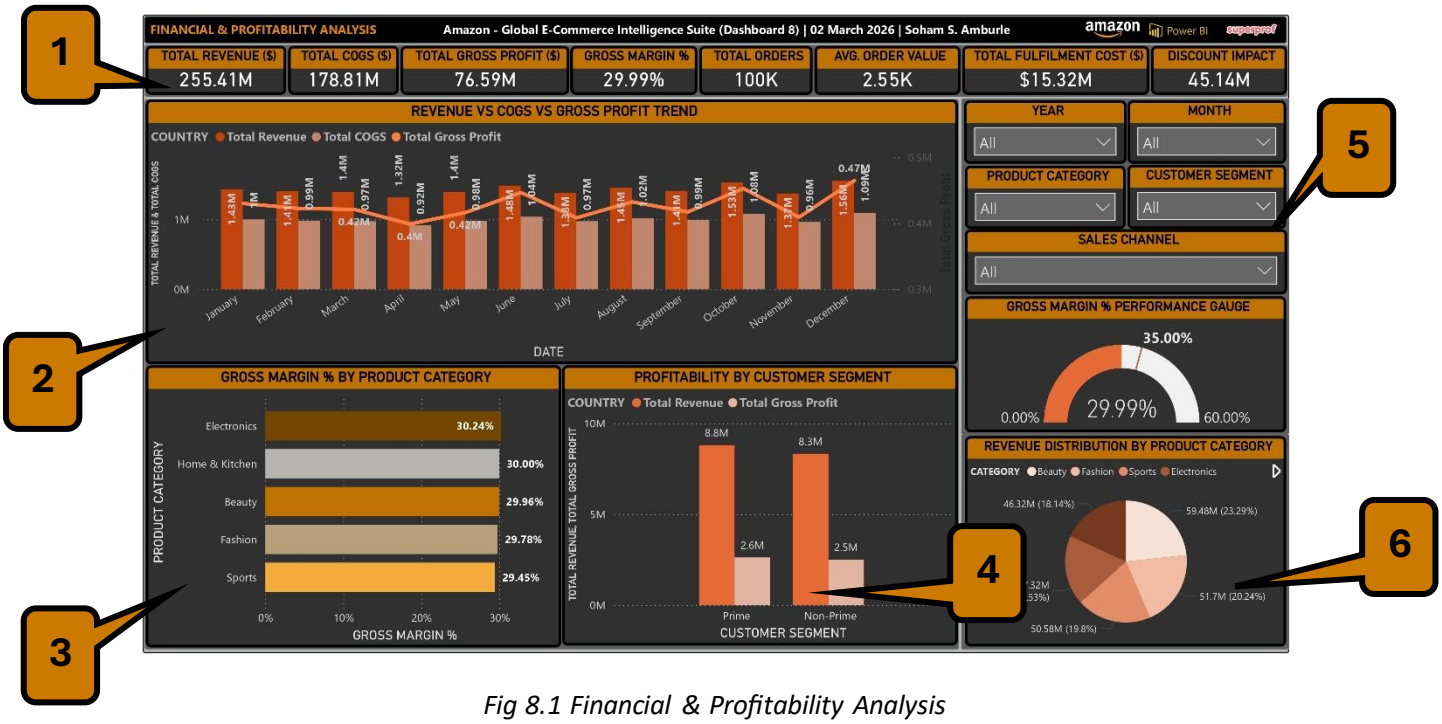

Fig 8.1 Financial & Profitability Analysis

Executive Storyline

The dashboard follows a structured financial analytics narrative:

- Monitor total revenue, gross profit, and cost structure
- Evaluate gross margin performance against strategic targets
- Analyze product category margin contribution
- Compare profitability between Prime and Non-Prime customers
- Assess the financial impact of discounting
- Understand revenue concentration across product categories

This layered structure allows stakeholders to move from high-level financial KPIs to category and customer-level profitability insights.

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.

Visuals and Description

1. KPI Cards (Executive Financial Snapshot)

Eight KPI cards provide an immediate financial overview:

1. Total Revenue – Overall sales revenue
2. Total Cost of Goods Sold (COGS) – Direct product cost
3. Total Gross Profit – Revenue minus COGS
4. Gross Margin % – Profitability ratio
5. Total Orders – Transaction volume
6. Average Order Value (AOV) – Revenue per order
7. Total Fulfilment Cost – Logistics and handling cost
8. Total Discount Impact – Revenue impact from discounting

These KPIs establish revenue scale, profitability efficiency, and pricing impact at an executive level.

2. Revenue vs COGS vs Gross Profit Trend (Line & Clustered Column Chart)

X-Axis: Month Name

Column Values: Total Revenue, Total COGS

Line Value: Total Gross Profit

Highlights revenue growth, cost behavior, and profit trend over time, supporting margin analysis.

3. Gross Margin % by Product Category (Clustered Bar Chart)

Axis: Product Category

Value: Gross Margin %

Identifies high-margin and low-margin categories, guiding pricing strategy and cost optimization.

4. Profitability by Customer Segment (Clustered Column Chart)

Axis: Customer Segment

Values: Total Revenue, Total Gross Profit

Tooltip: Gross Margin %

Evaluates profitability performance across Prime and Non-Prime customers.

5. Slicers (Dynamic Filtering Controls)

The dashboard includes five interactive slicers:

1. Year
2. Month Name
3. Product Category
4. Customer Segment
5. Sales Channel

All visuals dynamically respond to these filters, enabling multi-dimensional financial analysis.

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.

6. Gross Margin % Performance (Gauge)

Value: Gross Margin %

Target: 35%

Provides a quick visual benchmark of margin performance against strategic expectations.

7. Revenue Distribution by Product Category (Pie Chart)

Legend: Product Category

Value: Total Revenue

Illustrates revenue concentration and diversification across product categories.

Business Value

This dashboard enables stakeholders to:

- Monitor revenue, cost, and profitability in a consolidated executive view
- Identify margin compression or expansion trends
- Analyze product-level profitability drivers
- Compare customer segment financial performance
- Assess discount and fulfilment cost impact
- Support data-driven pricing and commercial strategy decisions

By integrating KPI monitoring, trend analytics, segmentation visuals, and interactive filtering, the dashboard delivers a structured and enterprise-ready financial intelligence solution.

Tools & Data

- Visualization Tool: Power BI
- Dataset: Fully synthetic global e-commerce dataset
- Record Count: 100,000 transaction-level records
- Time Period: 2021–2024
- Model Design: Star Schema (Fact_Orders with Dimension Tables for Date, Customer, Product, and Channel)
- Purpose: Financial analytics demonstration and enterprise BI portfolio development

Data Disclaimer: This project uses a fully synthetic dataset of 100,000 records for demonstration and testing only; no real-world data was used.
